g) H-index and Total Citation Number

H-index: 14

Total Citation Number: 616

The ***h-index*** is an index that attempts to measure both the productivity and impact of the published work of a scientist or scholar. The index is based on the set of the scientist's most cited papers and the number of citations that they have received in other publications. A scientist has index  $h$  if  $h$  of his/her  $N_p$  papers have at least  $h$  citations each, and the other  $(N_p - h)$  papers have no more than  $h$  citations each. In other words, a scholar with an index of  $h$  has published  $h$  papers each of which has been cited in other papers at least  $h$  times.
