Noisy Matching

In this assignment you have to find out how similar two string is. Longest common subsequence is a measure of similarity. But the strings that we are considering for this problem has been transmitted through network thus may not be exactly same as what was send. So we will consider the notation weighted common sequence.

We define matching score of two string to be sum of matching score of characters in each position. For example matching score of two *bad* and *bid* is $match(b, b)+match(a, i)+match(d, d)$. The 26×26 match table will be given as input.

An example of partial match table is shown below.

	a	b	c	d
a	5	1	3	2
b	1	4	1	2
c	3	1	4	1

Given two string A and B, you have to find a subsequence A_1 of A, and a subsequence B_1 of B, such that both are of same length and matching score of A_1 and B_1 is maximized.

Now consider two string $A = abbacca$ and $B = aabbccb$. If the match table is the one shown above, if we choose $A_1 = abbacca$ and $B_1 = aabbccb$ then matching score is $5+1+4+1+4+4+1 = 20$. But if we choose $A = abbcca$ and $B = abbccb$ then matching score is $5 + 4 + 4 + 4 + 4 + 1 = 22$ so this choice is better.

Input

The input consists of several test cases. First 26 line of each test case will contain 26 numbers the match table. The jth number of ith line will be match of ith character of alphabet with jth character. The jth number of ith line will always same as the ith number of jth line. The ith value of ith line will always greater then any other value in that line. All entry of the matrix will be less than 20. Next line will contain two string A and B. length of these string will be less than 500.

Last line of input will contain 26 zeros.

Output Specification

For each case of input, print the maximum achievable score.

Sample Input

```
5 1 3 2 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
1 4 1 2 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
3 1 4 1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
2 2 1 3 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
```

```

abbacca aabbccb

0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0
```

Sample Output

```
22
5
```

Remarks

There will be around 30 test cases. Time limit will be around 2 seconds.

An $O(l^3)$ algorithm may not pass the time limit.
